

DROBIMEX SZCZECIN COOLING PLANT

INDUSTRIAL CONSTRUCTION

EXTENSION OF POULTRY PROCESSING PLANT BY ADDING CHICKEN CARCASS COOLING PLANT WITH PRODUCTION FACILITIES ON KNIEWSKA STREET IN SZCZECIN

The contract comprised the construction of a two-story building with a carcass cooling technological line and a production part of 2,879m² of floor space and cubage of 28,415m³, together with the foundation and a feather loading shelter. The structure of the building was built from prefabricated reinforced concrete elements and steel. It is a referential plant in the food branch, with a cold store equipped with a modern technological line of cooling poultry carcasses on the second floor and the production part on the first floor. Modern, state-of-the-art solutions and materials used in construction for food and cooling industries were utilized in constructing the plant. Combining cooling technology with elements of packaging and logistics of the final product in the same building, located on a relatively small building area, allows the investor to save space and increase production efficiency from 100,000 to 180,000 chicken carcasses per day. The grounds around the existing plant (of a total area of 8,040m²) were also developed as part of the investment. The contract was realized under the supervision of Contract Engineer.

INVESTOR: DROBIMEX SP. Z O.O.

FORM: DESIGN AND BUILD
